

Service of the Month! How Community Pharmacists Make Birth Control More Accessible

Tetracaine lollipops are an amazingly convenient form of medication. It provides a numbing anesthetic to a targeted area in your mouth. Easy to apply, and easy to carry around.

These lollipops work great for dental procedures and oral lacerations. They are also great for children who may struggle to take local anesthetic in a different form.

Compounding for Autism

Autism is a neurodevelopment disorder that affects 1 in 36 children in the United States using 2020 data. Treatment for Autism Spectrum Disorder (ASD) most often involves behavioral therapy complemented by medication. Drugs used to treat autism are typically prescribed to help with hyperactivity, anxiety, and irritability. There are several medicines available, including glutathione and low dose naltrexone that have shown promise as treatments for autism and are also well-tolerated.

Our compounding pharmacists can customize medications to help solve problems associated with autism.

- Medications free of casein (dairy protein), gluten (wheat protein), corn, egg, and soy
- Sugar-free medications, to reduce the growth of yeast.
- Non-oral dosage forms (transdermal, rectal, nasal, injectable) for patients who have poor gut absorption secondary to inflammation, oxidative stress, and infections.
- Dose and flavor specific for each patient

Examples of requested compounded prescription medications include:

- Oral liquids or capsules of antifungals such as amphotericin B, diflucan, and ketoconazole
- Oral liquids or capsules of "nonabsorbable" antibiotics, such as vancomycin, to regulate gut microflora.
- Detoxifiers and chelators
- Antioxidants in oral, transdermal, and nebulized forms
- Low Dose Naltrexone (LDN)

Change in Route of Administration - an oral pill or capsule can be compounded into a topical cream or gel, suppository, lollipop, or gummy bear.

Medications can be formulated to eliminate unnecessary dyes, sugar, lactose, alcohol & preservatives.

Combination Preparations– We can combine multiple drugs into a single dosage form to simplify administration and improve patient compliance. Medications can also be flavored to the patient's taste.

We welcome your questions.
